RE: Request of No Cost Extension for Grant 3035

Dear Dr. McAllister:

This is to kindly ask you to consider a 'No Cost Extension' for my current support from the CTR - U.S.A., Inc. My grant entitled "Functional Analysis of yes and src Proto-oncogenes" will be finished on June 30, 1997. Since there are new and important research developments that emerged directly from the work supported by the CTR, I would like to consider applying for the third and final round of support in a form of a competitive renewal.

Thank you for your advice and consideration.

Yours sincerely,

Marius Sudol, Ph.D.  
Associate Professor

cc. Dr. Arthur Eisenberg

OR for further no-cost ext  
AIM

Action:

1. Patentability of the processes should be examined by Dr. H. J. Bluhm.
2. Further work is needed on use of non-tobacco binders, study of the internal structure of the cast rod, shelf life of the finished cigarette, filling capacity of the swollen tobacco, use of other extracting liquids, more details of smoke composition, an evaluation of the sidestream smoke produced, etc.
3. Although the author of CIM, 1977, No. 11 recommends this product for its low sidestream smoke, the reviewers find other attractive characteristics to recommend further study, e.g., swollen tobacco, low FTC "tar", higher puff number.
